Juniper Networks Juniper Networks Certified Internet Assoc(JNCIA-SSL) Exam

Practice Exam: jn0-561 Exams

Exam Number/Code: jn0-561

Exam Name: Juniper Networks Certified Internet Assoc(JNCIA-SSL) Exam

Questions and Answers: 120 Q&As

([JNCIA](#))

Exam : [jn0-561](#)

"Juniper Networks Certified Internet Assoc(JNCIA-SSL) Exam", also known as jn0-561 exam, is a Juniper Networks certification. With the complete collection of questions and answers, TestInside has assembled to take you through 120 Q&As to your jn0-561 Exam preparation. In the jn0-561 exam resources, you will cover every field and category in Juniper Networks Certification helping to ready you for your successful Juniper Networks Certification.

Quality and Value for the jn0-561 Exam TestInside Practice Exams for Juniper Networks **JNCIA** Certification jn0-561 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development.

TestInside provide the professional Q&A.

1. We offer free update service for three month.

After you purchase our product, we will offer free update in time for three month.

2. High quality and Value for the jn0-561 Exam.

jn0-561 simulation test questions, including the examination question and the answer, complete by our senior IT lecturers and the JNCIA product experts, included the current newest jn0-561 examination questions.

3. 100% Guarantee to Pass Your JNCIA exam and get your JNCIA Certification.

If you do not pass the Juniper Networks Certification jn0-561 exam (Juniper Networks Certified Internet Assoc(JNCIA-SSL) Exam) on your first attempt using our TestInside testing engine and pdf file, we will give you a FULL REFUND of your purchasing fee.

use TestInside jn0-561 Q&A ensure you pass the exam at your first try.

TestInside professional provide JNCIA jn0-561 the newest Q&A, completely covers jn0-561 test original topic. With our complete JNCIA resources, you will minimize your JNCIA cost and be ready to pass your jn0-561 tests on Your First Try, 100% Money Back Guarantee included!

[Juniper Networks jn0-561](#) Test belongs to one of the JNCIA certified test, if needs to obtain the JNCIA certificate, you also need to participate in other related test, the details you may visit the [JNCIA](#) certified topic, in there, you will see all related JNCIA certified subject of examination.

TestInside Testing Engine Features

Comprehensive questions and answers about jn0-561 exam

jn0-561 exam questions accompanied by exhibits

Verified Answers Researched by Industry Experts and almost 100% correct

jn0-561 exam questions updated on regular basis

Same type as the certification exams, jn0-561 exam preparation is in multiple-choice questions (MCQs).

Tested by multiple times before publishing

Try free jn0-561 exam demo before you decide to buy it in Test-Inside.com.

Note: This pdf demo do not include the question's picture.

Exam : Juniper JN0-561

Title : Juniper Networks Certified Internet Assoc(JNCIA-SSL) Exam

1. When using W-SAM, which statement is true about client privileges? (Choose two.)

- A. The user needs Administrator privileges to download the ActiveX control.
- B. The user needs Administrator privileges to download W-SAM via the Java delivery mechanism.
- C. The user needs Administrator privileges in order for the IVE to interface with the client LSP and manipulate traffic.
- D. The user needs Administrator privileges in order for the IVE to automatically install Secure Application Manager on the client.

Answer: AD

2. Which filter properly searches an AD/NT server directory via LDAP for the user login name and compares it to the user's IVE login name?

- A. cn=<USERNAME>
- B. cn=<samaccountname>
- C. samaccountname=<NAME>
- D. samaccountname=<USERNAME>

Answer: D

3. What is a disadvantage of using Client Server Application Layer Access?

- A. has limited auditing
- B. has only TCP/IP level authorization
- C. has operating system and/or JVM compatibility issues
- D. has limited resource access to enterprise Web applications and resources

Answer: C

4. Which three statements about a Server Certificate are true? (Choose three.)

- A. It is required for HTTP to function.
- B. It allows visitors to the server to authenticate its identity.
- C. It is a digital document that vouches for the identity of the server.
- D. It contains information about the server itself and the organization that owns the server.
- E. It is an electronic "drivers license" that establishes client credentials when doing business or other transactions on the Web.

Answer: BCD

5. Which three statements about IPSec VPNs are true? (Choose three.)

- A. IPSec VPNs are simple to deploy.
- B. IPSec VPNs are standards-based.
- C. IPSec VPNs provide a dedicated, always-on connection.
- D. IPSec encryption, data integrity, and authentication methods are well known.

Answer: BCD

6. Which three statements about SSL VPNs are true? (Choose three.)

- A. SSL VPNs are simple to deploy.
- B. SSL VPNs provide a dedicated, always-on connection.

- C.SSL VPNs provide high performance for individual connections.
- D.SSL VPNs use well-known technologies for secure individual connections.

Answer: ACD

7. Where is the IVE typically deployed in the network?

- A.behind the Internet firewall
- B.internally with all clients directly cabled to the IVE
- C.both interfaces on the outside of the Internet firewall in Transparent Mode
- D.parallel to the Internet firewall with one interface on the outside and one on the inside

Answer: A

8. Which model has externally accessible, hot swappable hard drives?

- A.SA700
- B.SA2000
- C.SA4000
- D.SA6000

Answer: D

9. Which two statements about TLS are true? (Choose two.)

- A.TLS is a descendent of SSL 3.0.
- B.It is not supported on the OpenSSL engine.
- C.It is the only transport protocol used by the IVE.
- D.It supports legacy SSL while codifying additional behaviors.

Answer: AD

10. Which Role-Based Session option would an administrator configure to allow a user to connect from different source IP addresses within the same user session?

- A.roaming session
- B.persistent session
- C.persistent password caching
- D.browser request follow-through

Answer: A

11. You have just created a resource policy for file access.

What is the default action?

- A.allow access
- B.deny access
- C.no default setting
- D.refer to detailed rule

Answer: A

12. What are two benefits of using SSL? (Choose two.)

- A.The SSL client is included in all Web browsers.
- B.SSL usually requires no client side configuration.
- C.The SSL client is smaller than most IPSec clients, with half the options to configure than that of an IPSec client.
- D.SSL outperforms IPSec on every level because it operates at the network layer rather than the application layer.

Answer: AB

13. You need to create a very detailed log search, but you do not have Central Manager installed.

How would you accomplish this?

- A.export the log and use third-party utility to search the file
- B.use dynamic logs and keep clicking on fields until you get as detailed as you need
- C.use the Filter tab and create your query using the query field, then reference the Filter Variables Dictionary

D.use the edit query feature on the log screen and use the "?" to get access to the Filter Variables Dictionary

Answer: A

14. What are two benefits of using SSL? (Choose two.)

A.SSL is a session layer protocol so it has no NAT or firewall transversal issues.

B.Remote Access with SSL only requires a web browser on the client for basic access.

C.SSL is a network layer protocol so it provides easy access to large numbers of users with minimal configuration.

D.While SSL VPNs are more difficult to set up than IPSec VPNs, they are much faster and offer higher encryption rates than that of IPSec VPNs. r on the client.

Answer: AB

15. What is a disadvantage of using Core Access?

A.has limited auditing

B.has no kiosk access

C.has limited resource access

D.requires administrator privileges on user machines to function

Answer: C

16. What are two functions performed by the Content Intermediation Engine? (Choose two.)

A.Parser: This function processes data streams into chunks that can be manipulated by the transformers.

B.Authorization: This function verifies the identity of users trying to access the IVE then forwards requests to the inside server using those credentials.

C.Authentication: This function verifies the identity of users trying to access the IVE and then intermediates requests to the inside server using those credentials.

D.Transformer: This function modifies the "chunked" data stream before it passes the data to the request handlers. Transformers modify internal URLs, HTML markup and scripts to refer to "virtual" URLs/markup/scripts sourced from the IVE appliance.

Answer: AD

17. Which statement is true about the IVE deployment option Two arm, DMZ?

A.The external interface is plugged into the DMZ and the internal interface is plugged into the internal LAN.

B.The internal interface is plugged into the internal LAN, behind a firewall with only SSL allowed to the IVE.

C.The external interface is plugged into an external DMZ and the internal interface is plugged into an internal DMZ.

D.The external interface is plugged into the external network without a firewall and the internal interface is plugged into the internal LAN.

Answer: A

18. Which two types of Digital Certificates are used by the IVE? (Choose two.)

A.Client Certificates

B.LDAP Certificates

C.Server Certificates

D.RADIUS Certificates

Answer: AC

19. What is the function of SSL?

A.encrypts data on the client's hard drive

B.allows anonymous file transfer over the Internet

C.protects clients from viruses and worms in email

D.negotiates encryption keys and authenticates the server

Answer: D

20. Which model does not support clustering?

A.SA700

- B.SA2000
- C.SA4000
- D.SA6000
- Answer: A
